The project management software

PROJEKTA

supports you in every step of your projects

- planning
- coordination & implementation
- evaluation
- time recording
- billing

What makes PROJEKTA unique?

- Use as a cloud service and as an inhouse solution
- Across all locations through browser technology
- Easy entry & high level functions

Let your project team get to know project work with the easy entry functions

Power-Users control projects with the demanding high level functions

„Ganz einfach" die richtige Entscheidung.

Multi-project management

PROJEKTA visualizes your projects and tasks in a clear bar chart that can be operated using drag-and-drop. The key data of your projects, such as status and costs, are compiled in your personal list.

## Capacity & resource planning

Cross-project resource management ensures that your staff and resources are optimally utilized. This prevents double bookings and resource bottlenecks.

Time & status recording

With the help of the integrated time & status recording, every employee can easily report back the required time and the task status. The data is immediately available to the project manager.

Project & cost controlling

The software creates cost transparency and enables project management to react immediately to unexpected changes within the project. PROJEKTA automatically warns project managers as soon as costs, effort or deadlines reach critical values.

Customer Relationship Management (CRM)

The integrated CRM module combines your contact persons and adresses with your projects and thus simplifies the organization and maintenance of your data.

Accounting

PROJEKTA generates invoices from the projects, which are drawn up on a lump-sum basis or according to expenditure. Digital billing processes are integrated, plus an invoice journal and the option of sending an invoice directly from the system.

„Ganz einfach" die richtige Entscheidung.
